SCHOLARSHIP PORTAL FOR COLLEGE

ABSTRACT

This project is developed for a scholarship department of a college. The scholarship department handles the scholarship sanctioned by the government to the students of colleges. It computerizes all the transactions of scholarship department like issuing of forms, submission of forms and sanction from college and distribution of amount to the students. This project intends to reduce the heavy paper work. This is otherwise involved in the manual system. Different types of reports are generated. At present the college maintains manual records in the form of registers, files, etc. to store the scholarship details of the students. New scholarship to be issued, involves heavy paper work. It also leads to data redundancy. Student's details are recorded in multiple files. To overcome all these we are developing this Scholarship Information System.
